R9 Residential Housing

LOCAL GOVERNMENT
Local decisions about the layout of each Activity. Games is made here. The worker can also negotiate from the Union (Public) to take and control directly in the Government.

UNION

URBAN MORPHOLOGY

COMPOSITION OF AN ENTOSURB
The hierarchy system of common and private living spaces with minimum impact on the Earth's surface.

The urban hotel room that is Dubai incurs its inhabitants to be lackadaisical in its maintenance and asks its architects, to create in their buildings will be adopted and their public spaces be contributed to.

The Democratic Surface, aims to formally represent a transparent and accessible Government. The surface is open, unobstructed and undulated explaining that although occupied by a governing body, all tenants and members of the public can traverse the surface and navigate freely.

1. Plans: The main aim is to transfer the static energy the wind generates in order to intensify a windy street zone and allow for the platform. 2. Mass Site: 3. Color Bands: These color bands generate enough activity for the housing to operate autonomously. Each panel is connected to three houses.

1. House: The house consists of all services are off accessible by platform by itself, getting to their own house, are not able for the single worker for most conventional workers are working independently, or not to meet their working hours, from a local, strong, and a well-defined identity, association. They are generally, initially, active in place but on the central platform for conventional parking. The housing is only intended for sleeping. The site is not suited for work. 2. Worker: These conventional urban plans lead workers to the house and use the platform to return one house. The site is not suited for work of workers. 3. Color: This color is a professional office with working activity, from the roof to the house, it also provides the structural support for the selected housing. 4. Platform: This is the common shared area for such collection of houses. There are 8 platforms for 8 different multiple houses.

1. The Structure: 2. Water Main: The main attachment of water that is distributed to each house and platform. Water is not here is gathered in three ways - generated from the ground like building site or a water tower in this second, contained from precipitation on the inside of the color panels. This is possible because the roof is curved, and from which (which is very rare event). 3. Circulation: Life connects everything. 4. Subdivisions.

1. 8. 0. Platform: A common surface that is centrally accessible. 2. 6. 0. Office of Local Government and the Union: The office of the Local Government and the Union office are separated from the platform as part of the surface sharing formally, a space is publicly responsible. 3. Common of color and Union: Both the common function of color and Union color for those of the Local Government and the workers. The common both a color of sleeping and factory, between two activities, mostly an active activities. 4. 7. The Democratic Surface: This site is formally, transparent and accessible. Government. The surface is open, unobstructed and undulated explaining that although occupied by a governing body, all tenants and members of the public can traverse the surface and navigate freely. Equally members of the union and local government that negotiate with a decision governing the facility, can defend the space as they choose and control the surface transparently and unobstructed.
